36. (Twice Amended) A system to enable a user to compose and deliver a message by facsimile, utilizing a form printed on at least one surface, the form including information relating to the user and at least one area for the user to enter the message, the at least one surface having coded data indicative of an identity of the form and of the at least one area, the system including

a computer system which:

causes the form to be provided to the user;

receives the interaction data from a sensing device used to compose the message, the interaction data being indicative of an identity of the form and a position of the sensing device relative to the area, the sensing device, when placed operatively relative to the area in order to compose the message, generating the interaction data based at least partially on sensing at least some of the coded data in the vicinity of the position; and

captures the message to be transmitted to a designated recipient address by facsimile delivery.
